

The Sound Learning Centre's
SenseAbility Sensory Development Programme

**Enhance a child's co-ordination, memory
concentration and organisation.**

**Help a child to express themselves
and speak more fluently.**

**Prepare a child for school
and give them the head start they deserve.**

An online practical course for parents, teachers, health and education professionals that will show you how to help a child reach their full developmental potential, eliminating possible learning difficulties even before they emerge.

This groundbreaking course is based on our therapeutic work since 1994 with children and adults with learning and sensory difficulties and incorporates the latest findings in these fields.

You will gain a comprehensive understanding of how hearing, vision, reflexes and sensori-neural systems impact on healthy child development. Learn how to evaluate and track progress yourself and have all the tools to implement an effective programme to support a child in their further development and learning. The suggested activities and included materials are suitable for children from 1 year until late teens.

Online SenseAbility Course:
3 June 2021 9am – 2:30pm

Costs are £145 per participant including all course materials. For more details, or to book your place, please contact us on Tel: +44 (0)20 8882 1060 or visit the website at www.thesoundlearningcentre.co.uk.

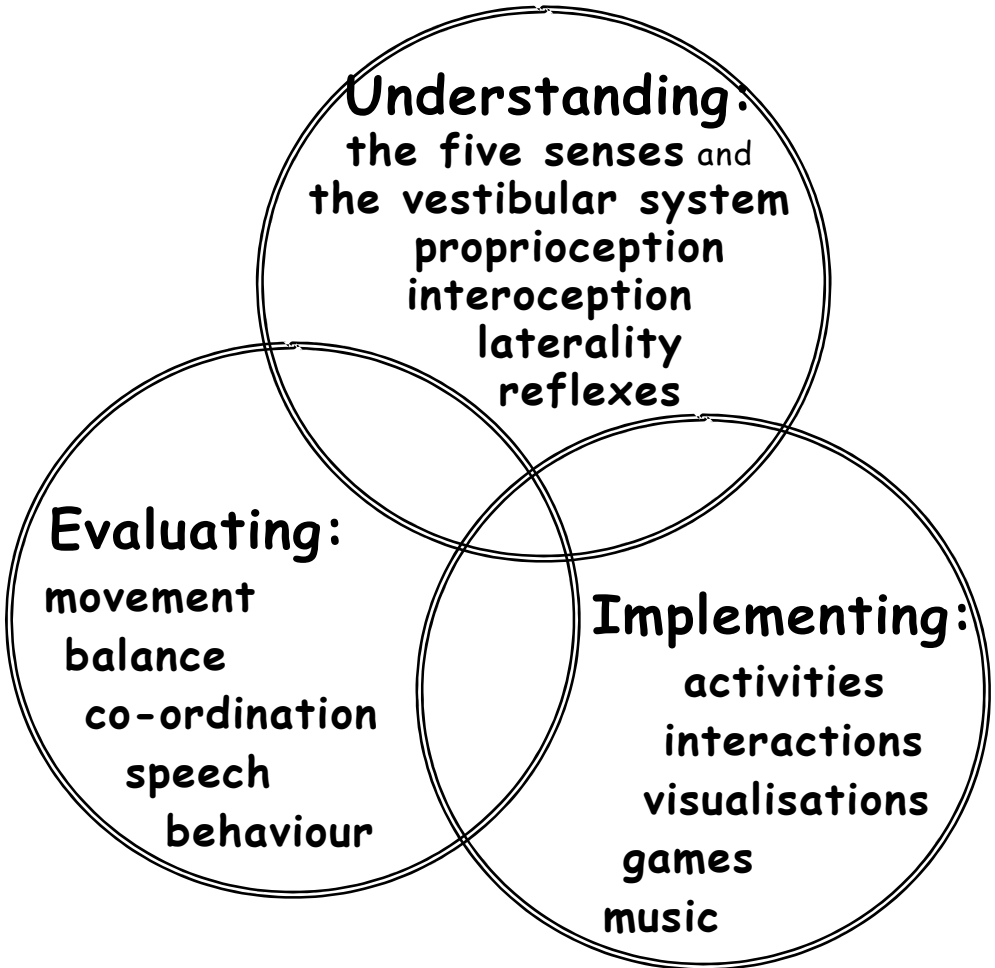

Payment for the SenseAbility Course is required as cleared funds two weeks prior to the Course date.

Sense Ability

The Sound Learning Centre's

Sensory Development Programme

Understand how the senses and other functions impact on a child's ability to learn and develop. Learn how to evaluate and track progress. Get the tools to support a child in reaching their full potential.
